

# Environment

A Bewuste Bouwer (Considerate Constructor) works in an environmentally responsible manner. The construction company has a policy to minimise the impact on the environment. The construction company takes measures and facilitates the construction site to work in a way which is less harmful to the environment, also with regard to the surrounding area.

## Measures

### As standard

- Energy and water saving measures have been implemented on the construction site.
- Measures to reduce energy and water consumption are being monitored.
- The construction site consciously and responsibly deals with waste and residual flow waste.
- Waste is collected and transported separately as different waste streams.
- The construction site is prepared to contain leaks and spills of oil and fuel.

### Above standard

- The construction site uses sustainably generated electricity.
- The construction site has a target for waste separation percentages.
- The project uses sustainable and/or emission-free equipment.
- (residual) Materials are recycled.

## Awareness & Communication

### As standard

- A toolbox about working in accordance with the environmental guidelines is organised at least once a year on the construction site or at the construction company.
- The (company) guidelines for sustainability (environment, waste, energy and water saving) are communicated on the construction site.

### Above standard

- Environmental measures are shared with stakeholders and are clearly visible.
- The results of monitoring and measuring are shared with stakeholders.
- Sustainability is a selection criterion for suppliers and subcontractors.
