

Safe

A Bewuste Bouwer (Considerate Constructor) contributes to ensuring on-site safety and particularly focuses on the area surrounding the building site. A stakeholder analysis clearly shows which target groups are involved. The construction site employees are aware of their own safety, the safety of others at the construction site and the safety risks for the immediate environment and clearly convey this.

Measures

As standard

- Guaranteeing the surrounding area's safety is dealt with in a systematic manner.
- Appropriate safety precautions have been taken on and around the construction site.
- The construction site has an efficiently working access control system.
- The construction work and construction traffic constitute an acceptable risk, set out in, for example, a BLVC-plan or Construction Safety Plan.
- Prescribed and approved PPE are available at the construction site for visitors and visitors are always accompanied.
- An AED is available at the construction site or at an alternative location.
- The construction site organisation maintains a sense of security in the surrounding area.

Above standard

- The surrounding area will be inspected periodically in consultation with the stakeholders.

Awareness & Communication

As standard

- It is clear how the management role has been implemented.
- It is clear where visitors have to report and how they can safely reach this location.
- Employees, visitors, subcontractors, suppliers and sub-contractors receive a route description, parking instructions and general safety instructions in advance.
- No unsafe situations have been identified on or around the construction site.
- An emergency plan or calamity plan is available on the construction site.
- One learns from mistakes and improves continuously the safety at and in around the construction site.
- Task Risk Analyses are prepared for the execution of high-risk activities, before the activities are carried out.

Above standard

- The building site influences desired (road) behaviour with measures other than standard signposting.
- Construction site employees proactively think about the surrounding area's safety.
- Errors, incidents and experiences are reported and shared with the environment, the client and the sector.
